U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 5. does NOT place the application in condition for allowance because: Applicants' arguments regarding patentability of the pending claims have been carefully reviewed by the examiner, however they do not put the case in condition for allowance. The applicants present 2 grounds of arguments for asserting that the 35 USC 103 rejection is improper. First, it is argued that the Swanson reference "teaches away" from disposing a fiber optic patch inside the housing because Swanson et al teach that one of the desired feature of the invention is to provide an apparatus "that is light in weight and compact and reasonably small in size so that it can readily be stored..." The examiner respectfully points out that disposing the fiber optic patch of Swanson does not make the invention unreasonably large and heavy in weight. Indeed, the reference itself discloses a carrier housing which encloses the entire fiber optic patch units along with transmission optical fibers which is NOT unreasonably large and heavy (Fig. 5-6). Although the reference does not explicitly disclose the use of a water-tight splice housing, the modification of the device to have a water-tight housing, such as that shown in Mullaney, does not make the device 'unreasonably' large in size and weight. Second, it is argued that the Mullaney reference only discloses the use of a fiber optic splice, not a fiber optic patch. The examiner respectfully points out that fiber optic patches and splices are closely related and commonly used in combination in the fiber optic splice art. Further, although Mullaney does not explicitly disclose the use of a fiber optic patch, it is fully within the scope of the reference to use a fiber optic patch, especially in a case where fiber slack is not sufficient. Therefore, the claim rejections based on 35 USC 103 is still proper.
